-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 2833

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over the admitted prior art (instant Figure 1) in view of Yamada et al 4955820.

The admitted prior art discloses a base portion, pushing surface, outwardly extending barbs, a contact arm 10 extending upwardly from the base portion, a lower portion extending downwardly from the base portion and including a leg and a tail 14, the tail being able to flex away from the leg. The admitted prior art, however, does not disclose a notch between the leg and the tail. Yamada et al (Figure 5) discloses leg 13, and a tail with an upright portion 18 and a foot 17, there being an arch-shaped notch between the leg and the tail. It thus would have been obvious to provide a notch between the leg and the tail of the admitted prior art, as taught by Yamada et al, to permit movement therebetween and thus relieve stress on the solder joint made between the foot and a substrate. This would inherently result in the upright portion of the tail being longer than the leg, and the notch height being the same as the leg height, and in any event would have been obvious to facilitate soldering to a substrate.

The other references cited on Form 892 disclose similar solder contacts.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gary F Paumen whose telephone number is 571-272-2013. The examiner can normally be reached on Monday-Thursday.
